**Abstract:** The genus Desmodium includes about 350 species, distributed in tropical and subtropical regions around the world. The objective of this review was to associate the traditional medicinal uses of the genus Desmodium with its biological activities reported in the scientific literature. Traditional medicinal uses and biological activities were described in 56 species. More than 100 traditional medicinal uses have been reported in 43 countries, highlighting the use in inflammatory, gastrointestinal and infectious processes, muscular pain, rheumatic, renal and hepatic affections. Among the 45 biological activities experimentally evaluated, antioxidant, antimicrobial, anti-inflammatory, hepatoprotective and antinociceptive were the most reported. The species with the highest number of studies were *D. gangeticum*, *D. adscendens* and *D. styracifolium*. In conclusion, several traditional medicinal uses have been experimentally supported, demonstrating the pharmacological potential of this genus.

**Keywords:** Desmodium; Traditional uses; Biological activity; Secondary metabolites; Medicinal plants.

**Resumen:** El género Desmodium incluye alrededor de 350 especies, distribuidas en regiones tropicales y subtropicales alrededor del mundo. El objetivo de esta revisión fue asociar los usos medicinales tradicionales del género Desmodium con sus actividades biológicas reportadas en la literatura científica. Los usos medicinales tradicionales y las actividades biológicas fueron descritos en 56 especies. Más de 100 usos medicinales tradicionales han sido reportados en 43 países, destacándose el uso en procesos inflamatorios, gastrointestinales e infecciosos, dolores musculares, reumáticos, afecciones renales y hepáticas. Dentro de las 45 actividades biológicas evaluadas experimentalmente, las más reportadas fueron la antioxidante, antimicrobiana, antiinflamatoria, hepatoprotectora y antinociceptiva. Las especies con mayor número de estudios fueron *D. gangeticum*, *D. adscendens* y *D. styracifolium*. En conclusión, varios usos medicinales tradicionales han sido experimentalmente respaldados, demostrando el potencial farmacológico de este género.

**Palabras clave:** Desmodium; Usos tradicionales; Actividad biológica; Metabolitos secundarios; Plantas medicinales.

## INTRODUCTION

The genus *Desmodium* belongs to the Fabaceae family and contains about 350 species, most of them are herbs, shrubs or sub-shrubs but rarely trees. They can be perennials or annuals. The genus is native from tropical America and it is currently widely distributed in tropical and subtropical regions of the world, such as East Asia, Mexico and South America. In recent decades this genus has been recognized for its high therapeutic value, which comes from ancient times (Tang *et al.*, 1984; Vanni, 2001; Ma *et al.*, 2011b).

Populations around the world continue using medicinal plants to relieve their health needs despite scientific advances in the fields of medicine and pharmacology. The wide use of this type of therapies in developing countries is attributed to its easy access and low cost, especially for patients with scarce resources (Bonilla *et al.*, 2014). The World Health Organization has strongly promoted the use of medicinal plants as a health-enhancing tool, but at the same time it urges the establishment of scientific bases that prove the safety and efficacy of such use (WHO, 2013).

Until 2011, more than 200 secondary metabolites have been isolated from the genus *Desmodium*. Flavonoids, alkaloids, steroids, terpenoids, phenols, phenylpropanoids, glycosides and volatile oils have been identified, which are related to specific biological activities. Alkaloids and flavonoids are considered to be mainly responsible for most of the activities shown by plants of this genus. Despite all these findings, a low amount of secondary metabolites have been evaluated to determine their biological activity (Ma *et al.*, 2011b). The purpose of this review is to associate the traditional medicinal uses of the genus *Desmodium* with their biological activities reported by scientific literature.

## MATERIAL AND METHODS

This review consisted of four stages: search, appraisal, analysis and synthesis.

1. Search: bibliographic documents were obtained from digital databases such as SciELO, ScienceDirect, EBSCOhost, SpringerLink, PubMed, and Google Scholar using the following keywords "*Desmodium*", "activity", "activities", "effects", "traditional", and its translations into Spanish; in addition, Boolean

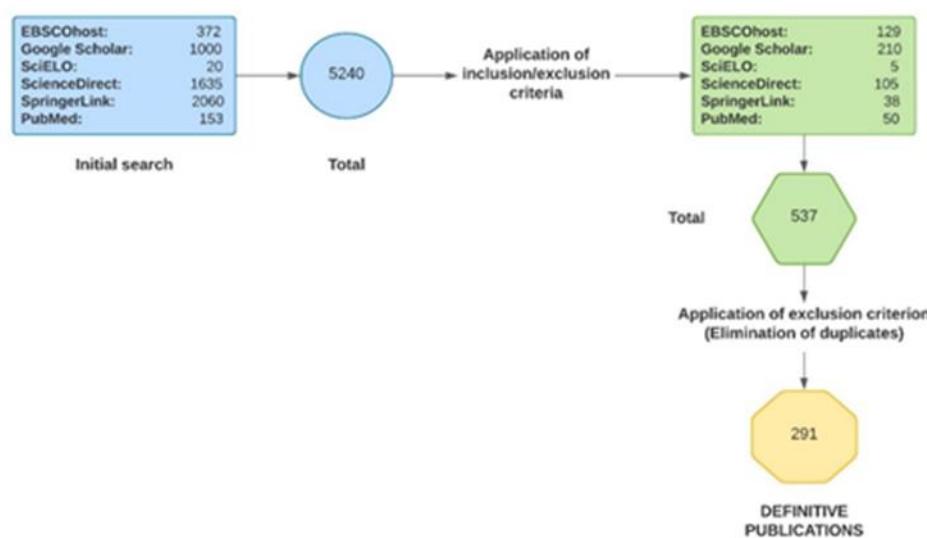

operators such as AND/OR were used. The resulting search equation was: ("*Desmodium*") AND ("activity" OR "activities" OR "effects" OR "traditional" OR "actividad" OR "tradicional"). A total of 5240 publications were initially retrieved.

2. Appraisal: the publications obtained from the search stage were selected according to their usefulness and relevance based on inclusion and exclusion criteria, the result was 535 useful publications, which were reduced to 290 once the duplicates were deleted. Inclusion and exclusion criteria are shown below:
  - Inclusion criteria: were included original articles, review articles, book chapters, academic degree work, publications released between 2010 and August 2020, publications in English and Spanish only.
  - Exclusion criteria: excludes articles that do not allow access to the full text, duplicate publications, publications that do not allow the correlation of secondary metabolites, groups of compounds or extracts with their biological activity or traditional medicinal use.
3. Analysis: the resulting 290 publications were further examined and information was extracted to correlate the relevant findings.
4. Synthesis: the results obtained were presented in narrative form accompanied by tables.

## RESULTS

A total of 5240 publications were identified in the search stage using keywords and Boolean operators combined in a search equation. After applying the inclusion and exclusion criteria, the number of publications selected for the development of the review was reduced to 290 (Figure No. 1).

Traditional medicinal uses and biological activities were reported and studied in 56 species of the genus *Desmodium*. More than 100 traditional medicinal uses of this genus have been reported from a total of 43 countries. The country with the highest number of publications reporting the traditional medicinal uses of this genus was India (70), followed by China (36), Peru (13), Brazil (10), and Pakistan (10). Complete information on the traditional medicinal uses reported in the genus *Desmodium* and its parts used is presented in Table No. 1.

**Figure No. 1**  
Number of publications obtained during search and appraisal stages

**Table No. 1**  
Traditional medicinal uses of the genus *Desmodium*

Species	Country or place where was reported	Part(s) used	Traditional medicinal uses	References
<i>Desmodium adscendens</i> (Sw.) DC.	Nigeria	-	Muscle cramps, tendon, spinal pain, bronchitis, epilepsy, central nervous system disorders, rheumatism, jaundice, hepatitis, hepatoprotective, asthma, eczema, allergic symptoms, antispasmodic, antihypertensive.	(Seriki, 2019)
	Republic of the Congo	Leaves	Fever, pain, epilepsy.	(Muanda et al., 2011a)
	Ghana	Whole plant	Asthma and other diseases associated with smooth-muscle contraction.	(Rammal & Soulimani, 2011)
	Ivory Coast	Leaves	Asthma.	(Irié-N'guessan et al., 2011)
	Brazil	Leaves	Leucorrhoea, body aches, pain, ovarian inflammations, excessive urination, gonorrhoea, diarrhoea.	(Charles et al., 2016)
	Africa	Leaves	Diseases associated with smooth-muscles, asthma, fever, pain, epilepsy.	
	Africa and South America	Leaves and stems	Asthma, liver related diseases.	(Chuisseu et al., 2020)
	-	-	Digestive system disorders or abdominal and back pain.	
	-	-	Spasm, rheumatism, jaundice, hepatitis, asthma.	(Adinoyi, 2020)

Species	Country or place where was reported	Part(s) used	Traditional medicinal uses	References
<i>Desmodium adscendens</i> (Sw.) DC.	Benin	Stem	Diarrhoea, stomach aches, angina, dysentery, ulcer, gastritis, asthma, dysmenorrhoea, childbirth difficulty, early menopause, diabetes, hypertension, hepatitis, urinary infections, headache, tiredness and cancer.	(Toyigbénan <i>et al.</i> , 2018)
	Africa	-	Asthma, to aid parturition, to treat dysmenorrhoea and to improve lactation, hepatoprotective, to manage fever, pain and epilepsy.	(Baiocchi <i>et al.</i> , 2013)
	Africa	-	Asthma and diseases associated with smooth-muscles contraction.	(François <i>et al.</i> , 2015)
	Brazil	Leaves	Gonorrhoea, diarrhoea, body aches, excessive urination and ovarian inflammations.	
	France	-	Hepatoprotective supplement.	
	Africa and South America	Leaves and/or stems	Anti-inflammatory disorders, hepatitis and for the treatment of pain, fever, asthma, seizures, muscle spasms, snake bites.	(van Dooren <i>et al.</i> , 2018)
	Ghana	-	Psychosis.	(Amoateng <i>et al.</i> , 2017)
		Whole plant	Dysmenorrhoea, hemorrhoids, schizophrenia.	
		Leafy stem	Asthma and atopic asthma.	
		Leaves	Infantile diarrhoea, galactagogue, dysentery.	
Ivory Coast	Ivory Coast	Leaves	Pregnancy care, diarrhoea, wound.	(Malan <i>et al.</i> , 2015)
	Cameroon	Young leaves	Antidote for snake venom.	
	Nicaragua	Young leaves	Antidote for snake venom.	(Zielińska-Pisklak <i>et al.</i> , 2015)
	Ghana	-	Excessive smooth muscle contraction, especially asthma.	
	Republic of the Congo	-	Analgesic, antipyretic, anticonvulsant.	
	-	-	Hepatoprotective, appetizer, cholagogue, vulnerary, digestive,	(Granda Calle, 2015)
	-	Apical shoots	depurative, antivomitive, choleretic, antiallergic, calming, fractures.	
	-	Branches		
	-	Young leaves	Dysentery.	
	-	Plant and root	Threatened abortion.	
Brazil	-	Roots	Antivenom.	
	-	Dry leaves	Antidote for stings even antiophidic.	
	-	-	Colds.	
	-	-	Irritated skin.	
	-	-	Asthma, bronchitis, central nervous system disorders, vaginal infections, promote lactation in women, wounds and sores, malaria, diarrhoea, ovarian and uterine problems.	(Adeniyi <i>et al.</i> , 2013)
Peru	Whole plant		Anti-inflammatory for the ovaries and/or uterus.	(Yazbek <i>et al.</i> , 2016)
	Roots		Diarrhoea, vomiting, kidney pain, ovarian inflammation, back pain.	(Valadeau <i>et al.</i> , 2010)
	Leaves		Liver pain, boils.	

Species	Country or place where was reported	Part(s) used	Traditional medicinal uses	References
<i>Desmodium adscendens</i> (Sw.) DC.	Peru	Aerial parts	Symptoms of hepatitis and liver injuries.	(Roumy et al., 2020)
	Belize	-	Diabetes.	(Ferrier et al., 2018)
	Nicaragua	Leaves, whole plant, roots	Skin conditions.	(Giovannini et al., 2016)
	Central America	-	Skin conditions, kidney diseases, urinary problems.	
	-	Leaves	Treatment of wounds, stomach ailments, and other infections.	(Lakkakula et al., 2017)
	Brazil	-	Leucorrhoea, body aches, pains, ovarian inflammations, excessive urination, gonorrhoea, diarrhoea.	
	Republic of the Congo	-	Fever, pain, epilepsy.	
	Cameroon	-		
	Ghana	Leaves	Prevent respiratory infections. Wounds, bronchial asthma, constipation, dysentery.	
	Ghana	Leaves and stems	Cancer of prostate, breast, throat, brain, liver.	(Agyare et al., 2018)
<i>Desmodium axillare</i> (Sw.) DC.	Ecuador	Leaves, stems, whole plant, fruit	Leishmaniasis.	(Gachet et al., 2010)
	Brazil	Whole plant	Kidney problems.	(Tribess et al., 2015)
	Nicaragua	Leaves, whole plant, roots	Snake bite.	(Giovannini & Howes, 2017)
	-	-	Constipation and other gastrointestinal ailments, bronchial asthma, inflammations, coughs and colds.	(Quaye et al., 2017)
	-	Leaves	Treatment of snake bites and wounds in general.	
	-	Leaves, whole plant	Cough, asthma, bronchitis, tuberculosis, allergies, contraceptives, analgesic, wounds, venereal diseases, muscle pains, joint aches, kidney disorders, constipation, impotency, central nervous system disorders.	(Fomogne-Fodjo et al., 2014)
	Panama	Stems	Facilitate childbirth, postpartum aid to expel the placenta.	(Locklear et al., 2018)
	Peru	Leaves	Leishmaniasis.	(Odonne et al., 2013)
	Belize	-	Diabetes.	(Ferrier et al., 2018)
<i>Desmodium barbatum</i> (L.) Benth.	Tanzania	Leaves and stems	Abortion inducer.	(Nikolajsen et al., 2011)
	Nicaragua	Leaves and roots	Skin conditions.	(Giovannini et al., 2016)
<i>Desmodium canescens</i> (L.) DC.	Tanzania	-	Treatment of peptic ulcers.	(Macha et al., 2018)
<i>Desmodium caudatum</i> (Thunb.) DC.	-	Roots	Rheumatic backache, diarrhoea, icterohepatitis, abscesses, anthelmintic.	(Li et al., 2014a)
	Japan	Roots	Rheumatic backache, diarrhoea, icteric hepatitis, abscesses, anthelmintic.	(Sasaki et al., 2014)

Species	Country or place where was reported	Part(s) used	Traditional medicinal uses	References
<i>Desmodium caudatum</i> (Thunb.) DC.	China	Whole plant	Febrile diseases, rheumatic arthritis, bacillary dysentery.	(Ma et al., 2011a)
	China	Whole plant or root	Fever, gastroenteritis, dysentery, rheumatic arthritis.	(Li et al., 2019)
	China	Whole plant or roots	Rheumatic backache, stomach pain, lymphadenitis, nephritis.	(Xu et al., 2020)
	China	-	Fever, dysentery, gastroenteritis, rectal prolapse, snake bites, mastitis, boils carbuncle.	(Guo et al., 2016)
<i>Desmodium confertum</i> DC.	Nepal	Leaves	Eye problems.	(Rokaya et al., 2010)
<i>Desmodium delotum</i> J.F. Macbr.	Ethiopia	Leaf apex	Eye illness.	(Tolossa et al., 2013)
<i>Desmodium elegans</i> DC.	India	-	Epilepsy, carminative.	(Paniagua-Zambrana et al., 2020)
<i>Desmodium gangeticum</i> (L.) DC.	China	Leaves	Antidotes, hemorrhoids.	(Zhi et al., 2014)
	Pakistan	Roots	Carminative, tonic, diuretic, chronic fever, cough, vomiting, asthma, snake bite.	(Haq et al., 2011)
	Himalayan region	Whole plant	Bronchitis.	(Amber et al., 2017)
	India	Roots	Epilepsy, carminative.	(Bhat et al., 2013)
	Pakistan	Roots and leaves	Earache, stomach pain, joint pain.	(Aziz et al., 2017)
	India	Roots	Epilepsy.	(Sharma et al., 2013)
	Pakistan	Roots	Scorpion sting and snake bite.	(Butt et al., 2015)
	India	Leaves	Cuts, teeth cleaning, wounds.	(Gairola et al., 2014)
	Pakistan	Roots and leaves	Cough, asthma.	(Kayani et al., 2014)
	Pakistan	Leaves	Anticancer.	(Hussain et al., 2019)
<i>Desmodium gangeticum</i> (L.) DC.	Pakistan	-	Rheumatism.	(Alamgeer et al., 2018)
	India	-	Asthma.	(Bhanisana Devi et al., 2015)
	Indonesia	Leaves	Rheumatism.	(Silalahi et al., 2015)
<i>Desmodium gangeticum</i> (L.) DC.	India	-	Snake bites, asthma, bronchitis, cough, dysentery, eye infection, fever, vomiting.	(Paniagua-Zambrana et al., 2020)
	India	-	Scorpion sting, snake bites, diabetes mellitus, ulcer.	(Al-Asmari et al., 2020)
	India	Root	Typhoid fever, urinary discharges, piles, inflammations, treatment of ischemic heart disease and other heart diseases.	(Das et al., 2014)
	India	-	Typhoid, piles, asthma, bronchitis, bitter tonic, febrifuge, digestive, antacarrrhal, antiemetic, in inflammatory conditions of chest and in other inflammatory conditions.	(Lagudu & Owk, 2016)
	India	Whole plant	Digestive disorders, edema, diarrhoea, intermittent fever, malaria, urinary tract infections.	(Basheer & Satis, 2018)
	India	-	Bronchitis, asthma, inflammations, dysentery.	

Species	Country or place where was reported	Part(s) used	Traditional medicinal uses	References
	India	Whole plant	Thermogenic, nerve tonic, aphrodisiac, demulcent, anthelmintic, cardiac tonic, febrifuge, anti-inflammatory, diuretic, hemostatic, rejuvenating and useful in neuromuscular and ophthalmic disorders, loss of appetite, flatulence, diarrhoea, dysentery, nausea, piles, angina pain, cardiac disorders, tuberculosis, cough, seminal weakness, urinary disorders, fever, debility and gout. Treatment of heart diseases, especially in angina pectoris and myocardial infarction. Strengthens heart muscles and reduces cholesterol. Typhoid, pneumonia. Fever, kidney disorders.	(Priyadarshini, 2016)
		Root		
	India	Root, bark and leaves	Typhoid, piles, inflammation, asthma, bronchitis, dysentery. Snake bite, ulcer, diabetes mellitus. Anthelminthic, antidiarrhoeal, expectorant, astringent, febrifuge, nerve tonic, antidiarrhoeal, bronchodilator, vasopressor, analgesic, antipyretic, cardiotonic, stimulant, antioxidant, anti-inflammatory. 	Brazil	Roots	Fever, expectorant, depurative.	(Magalhães et al., 2019)
	Brazil	Aerial parts	Endocrine, nutritional, and metabolic diseases, mental and behavioral disorders, diseases of the digestive system.	(Rossi-Santos et al., 2018)
	Belize	Leaves	Snake bite.	(Giovannini & Howes, 2017)
	Brazil	-	Dysentery.	(Bieski et al., 2015)
<i>Desmodium laburnifolium</i> (Poir.) DC.	Brazil	Whole plant	Infectious diseases.	(Bolson et al., 2015)
	South Africa	-	Septic wounds, sores, heartburn, stomach problems, prevent miscarriage, impotence.	(Mhlongo & Van Wyk, 2019)
<i>Desmodium laxiflorum</i> DC.	Ecuador	Leaves and roots	Reduce bleeding after delivery.	(Torri, 2013)
<i>Desmodium microphyllum</i> (Thunb.) DC.	India	Roots	Dermatological and digestive disorders.	(Negi et al., 2018)
<i>Desmodium molliculum</i> (Kunth) DC.	Guinea	Leaves	Diabetes.	(Diallo et al., 2012)
	India	Leaves and stems	Menstrual cycle irregularity, uterus infection.	(Taid et al., 2014)
	India	-	Eye problems, fever, cough, headache, boils, blisters, wounds.	(Thakur et al., 2016)
	India	Roots	Female reproductive problems.	(Gairola et al., 2014)
	Ecuador	-	Diuretic, anti-inflammatory, emmenagogue, blood purifier, wounds treatment.	(Salazar Toaquiza, 2015)
Peru	-	-	Anti-inflammatory, antiseptic and wound healer.	(Acero-Carrión et al., 2012)
	-	-	Blood purifier, diuretic, detoxification, gastritis, reduces inflammation of the urinary tract, detoxifies the liver, antiallergic, antispasmodic, antiviral.	(Saucedo Estela & Tocto Céspedes, 2018)
	-	-	Antirheumatic, anti-inflammatory, antiasthmatic, antipyretic, calming, sudorific.	(Gordillo et al., 2019)
	-	Leaves and stems	Treatment of the symptoms of respiratory diseases, anti-inflammatory, asthma, liver disorders.	
	Peru	Whole plant	Inflammation of the ovaries, inflammation of the uterus.	(Bussmann & Glenn, 2010)

Species	Country or place where was reported	Part(s) used	Traditional medicinal uses	References
	Peru	Whole plant, except the root	Diuretic, anti-inflammatory, emmenagogue, blood purifier, asthma, wounds treatment.	(Barreto Yaya, 2018)
	Peru	-	Diuretic, blood purifier, antihemorrhagic, antidiarrheal, anti-inflammatory of the urinary tract, liver and kidneys.	(Cancho Arias, 2018)
	Peru	Whole plant	Inflammation of the kidneys, ovaries and uterus, diarrhoea, stomach ache, gastritis, wounds cleansing, scars.	(Bussmann et al., 2010)
	-	-	Contraceptive, diuretic, antihemorrhagic, blood purifier, anti-inflammatory of the urinary tract, liver and kidneys.	(Acaro Chuquicaña, 2013)
	Peru	Branches	Salpingitis, liver conditions, washing wounds, anti-inflammatory, renal problems.	(Castañeda et al., 2017)
<i>Desmodium molliculum</i> (Kunth) DC.	Ecuador	Plant without root	Vaginal disorders, abdominal pain, menstrual cramps and related disorders, ovary inflammation, promoting labor and childbirth recovery.	(Tinitana et al., 2016)
		Aerial part	Liver problems and pain, stomach ache, gastritis, general digestive problems, inflammation, blood depurative.	(Carraz et al., 2015)
	Peru	Whole plant	Kidney problems.	
			Liver problem and pain, hepatitis, kidney problems, stomach ache, general digestive problems, intestinal spasms with diarrhoea.	(Gonzales de la Cruz et al., 2014)
	Colombia	Branches	Inflammations of the ovaries, liver diseases, agent to fight infections in	(Paniagua-Zambrana et al., 2020)
	Ecuador	Whole plant Leaves	wounds, reduce blows, relieve the pains associated with kidney problems.	
	Peru	Whole plant	Intestinal pain, white and yellow vaginal discharge.	
			Clean and disinfect wounds, regulate blood and to treat pimples, inflammations, bellyache.	
			Inflammation, diarrhoea, stomach ache, gastritis, washing wounds.	
	Peru	Whole plant	Kidney and urinary tract inflammation, infection, stomach inflammation, ovary and vaginal inflammation, wounds, liver problems.	(Monigatti et al., 2013)
	Ecuador	-	Skin infections (scabies).	(Landeta, 2015)
	-	-	Nervousness.	(Olivera & Principe, 2018)
	-	-	Promote lactation, arthritis.	
	Africa	-	Detoxify the body.	
	-	Leaves	Seizures, venereal ulcers, vaginal infections.	

Species	Country or place where was reported	Part(s) used	Traditional medicinal uses	References
<i>Desmodium motorium</i> (Houtt.) Merr.	India	Roots	Emollient, laxative, antidysenteric,	(Chitra Devi & Narmathabai, 2011)
		Leaves	antirheumatic, to treat cough, asthma, fever.	
		Leaves and fruits	Tonic, febrifuge, diuretic, aphrodisiac.	
		Whole plant	Wounds.	
		Flower	Diabetes mellitus.	
	Thailand	Whole plant	Menstrual disorders, tuberculosis, sexual impotence, headache and boils.	
			Prevent cancer of the stomach and intestines, treat nerve damage and strengthening the immune system.	
			Peptic ulcer, indigestion.	(Mall et al., 2015)
			Eliminate excessive body heat and detoxify the body, anti-itch, infantile malnutrition.	
			Cough, cold, headache, impotence.	(Hu et al., 2020)
<i>Desmodium multiflorum</i> DC.	Nepal	Roots		
	China	Root		
<i>Desmodium oblongum</i> Wall. ex Benth.	China	-		
	Thailand	Roots	Tonic, lumbago.	(Li et al., 2017b)
<i>Desmodium oojeinense</i> (Roxb.) H. Ohashi	India	Bark	Low blood pressure.	(Khuankaew et al., 2014)
	India	Bark	Anthelmintic, astringent to the bowels, dysentery, leucoderma, ulcers, blood diseases, skin diseases, burning sensations, anemia.	(Joshi & Tyagi, 2011)
	-	-	Diarrhoea, dysentery, febrifuge, diabetes, anemia, leucoderma, ulcers.	(Jayadevaiah et al., 2012)
<i>Desmodium oxyphyllum</i> DC.	-	-	Febrile diseases, cough, asthma, hepatitis, bleeding wounds.	(Nirawane et al., 2017)
<i>Desmodium podocarpum</i> DC.	China	Whole plant	Febrile diseases, cough, bleeding wounds.	
	India	Whole plant	Cough.	(Zhu et al., 2011)
	-	-	Febrile diseases, cough, asthma, hepatitis, bleeding wounds.	(Dutt et al., 2015)
<i>Desmodium polycarpon</i> (Poir.) DC.	India	Leaves	Stomach ache.	(Qin et al., 2015)
<i>Desmodium polycarpum</i> (Poir.) DC.	Pakistan	Roots	Fever, cardiac tonic, diuretic, loss of appetite, flatulence, diarrhoea, dysentery, nausea, piles, helminthiasis, cough.	(Amjad et al., 2017)
<i>Desmodium pulchellum</i> (L.) Benth. in Miq.	-	Leaves	Cold, fever, malaria, enlargement of liver and spleen, rheumatism, bone pains, swelling due to contusion or sprain, ulcers and skin sores in hemorrhages.	
	-	Roots	Reduce excessive menstrual flow.	(Rahman et al., 2013)
	-	Bark	Diarrhoea, poisoning, eye diseases.	
	China	Whole plant	Rheumatic fever, infant seizures, toothache, to dissolve internal blood clots, to aid digestion.	

Species	Country or place where was reported	Part(s) used	Traditional medicinal uses	References
<i>Desmodium pulchellum</i> (L.) Benth. in Miq.	-	Bark	Diarrhoea, hemorrhages, eye diseases.	(Reyad-ul-ferdous <i>et al.</i> , 2015)
	-	Roots	Burning sensations in the abdomen.	
	-	Flowers	Dental cavities.	
	-	Stem bark	Headache, hypotensive.	
	China	-	Seizures (in children), rheumatic fever, to dissolve internal blood clots and generate new red blood cells, rheumatism, toothache.	
	Philippines	Leaves	Pocks, ulcers.	
	Malaysia	Roots	Puerperium.	
	India	Leaves	Malaria, enlargement of liver and spleen, rheumatism, bone pains, swelling.	(Bhuyan & Rajak, 2019)
	India	Whole plant	Stomach pain, amebic dysentery.	(Dey & De, 2012)
	Bangladesh	Leaves and branches	Edema.	(Fahim Kadir <i>et al.</i> , 2014)
<i>Desmodium racemosum</i> DC. <i>Desmodium ramosissimum</i> G. Don	India	Leaves	Wounds.	(Padal <i>et al.</i> , 2013)
	-	-	Cold, fever, malaria.	(Noor <i>et al.</i> , 2013)
	-	Leaves	Ulcers.	
	-	Bark	Diarrhoea, eye afflictions, malaria, swelling, rheumatism.	
	China	-	Schistosomiasis.	
	-	-	Cold, fever, malaria.	(Ahmed <i>et al.</i> , 2013)
	-	Leaves	Ulcers.	
	-	Bark	Diarrhoea, eye afflictions, malaria, swelling, rheumatism.	
	China	-	Schistosomiasis.	
	India	Leaves	Menorrhagia.	(Lingaraju <i>et al.</i> , 2013)
<i>Desmodium repandum</i> (Vahl) Poir. in F. Cuvier	China	Whole plant	Stomach ache, infantile malnutrition.	(Hu <i>et al.</i> , 2020)
	Nigeria	Leaves	Diarrhoea, dysentery, fever, pulmonary troubles, cough, venereal diseases, jaundice.	(Alli <i>et al.</i> , 2011)
	Benin	Stem	Diarrhoea, stomach aches, angina, dysentery, ulcer, gastritis, asthma, dysmenorrhoea, childbirth difficulty, early menopause, diabetes, hypertension, hepatitis, urinary infections, headache, tiredness and cancer.	(Toyigbénan <i>et al.</i> , 2018)
	Madagascar	-	Dental cavities, diarrhoea, abdominal pain, cough.	(Paniagua-Zambrana <i>et al.</i> , 2020)
	Madagascar	Leaves	Diarrhoea.	(Rakotoarivelo <i>et al.</i> , 2015)
	Nigeria	Leaves	Analgesic, dysentery, diarrhoea, fever, pulmonary, eye, and ear problems, cough, venereal diseases, jaundice.	(Ezealigo, 2016)
	Benin	Leaves	Malaria.	(Yetein <i>et al.</i> , 2013)
	China	-	Diuretic, anti-inflammatory, detoxifying.	(Li <i>et al.</i> , 2014c)
	Rwanda	Leaves	Liver diseases.	(Mukazayire <i>et al.</i> , 2011)
	Uganda	Leaves	Tuberculosis.	(Tabuti <i>et al.</i> , 2010)
	Uganda	Leaves	Diarrhoea.	(Namukobe <i>et al.</i> , 2011)

Species	Country or place where was reported	Part(s) used	Traditional medicinal uses	References
	Uganda	Leaves	Treatment of symptoms of tuberculosis.	(Obakiro et al., 2020)
<i>Desmodium retroflexum</i> DC.	India	Roots	Emmenagogue.	(Kumar et al., 2012)
<i>Desmodium salicifolium</i> (Poir.) DC.	Uganda	Leaves	Tuberculosis.	(Bunalema et al., 2014)
<i>Desmodium salicifolium</i> (Poir.) DC.	-	Leaves, whole plant	Respiratory problems, malaria, yellow fever.	(Fomogne-Fodjo et al., 2014)
	Uganda	Leaves	Treatment of symptoms of tuberculosis.	(Obakiro et al., 2020)
<i>Desmodium sequax</i> Wall.	Philippines	Leaves	Wounds.	(Galvez, 2015)
<i>Desmodium setigerum</i> (E. Mey.) Benth. ex Harv.	Angola	Whole plant	Hemorrhoids.	(Lautenschläger et al., 2018)
	South Africa	-	Lice, septic wounds, sores, stomach problems.	(Mhlongo & Van Wyk, 2019)
<i>Desmodium strangulatum</i> Wight & Arn.	Indonesia	Leaves	Bone fractures.	(Silalahi et al., 2015)
<i>Desmodium styracifolium</i> (Osbeck) Merr.	China	Aerial parts	Heat clearing, urinary diseases (red urine, heat strangury, stone strangury, slow and painful urination, edema and small quantify of urination, bladder and kidney stones). Rheumatism, pyrexia, dysentery, wounds, cough, malaria, hepatitis, cholelithiasis, jaundice, hemoptysis, stomatitis, laryngitis, urticaria.	(Wagner et al., 2015)
	Vietnam	Whole plant	Urolithiasis, kidney problems, urethral infection, edematous nephritis, hepatitis.	(Giang Phan et al., 2010)
	China	Aerial parts	Treatment of renal stones due to its heat clearing and diuretic properties.	(Xiang et al., 2015)
China	-		Treatment of urolithiasis.	(Mi et al., 2012)
China	Aerial parts		Pyretic strangury, urolithiasis, painful urination, oliguria.	(Cheng et al., 2018)
China	-		Diuretic, treatment of urinary stones.	(Xie et al., 2018)
China	-		Renal diseases (kidney stone or kidney damage).	(Xie et al., 2019)
	Rhizome		Emmenagogue, stomachic.	(Alok et al., 2013)
China	-		Urination disorders, urolithiasis, edema, jaundice.	(Chen et al., 2020)
China	-		Diuretic, heat clearing, treatment of renal stones, hepatitis, cardio/cerebrovascular diseases.	(Zhou et al., 2012)
Vietnam	Aerial parts		To treat liver, kidney, urethra, bladder stones, painful urination, frequent urination, difficult urination due to urinary tract infection, edema, jaundice, carbuncles, itching.	(Woerdenbag et al., 2012)
-	Aerial parts		Jaundice, reddish urine, strangury, difficult and painful urination, edema with scanty urine.	(Xi & Gong, 2017)
China	Aerial parts		Inflammation, pyrexia, kidney stone.	(Liu et al., 2020c)

Species	Country or place where was reported	Part(s) used	Traditional medicinal uses	References
<i>Desmodium styracifolium</i> (Osbeck) Merr.	China	-	Treatment of kidney stone due to its heat clearing and diuretic properties, treatment of urolithiasis, cardio/cerebrovascular diseases, hepatitis.	(Zhou et al., 2018)
	China	Whole plant	Treatment and management of urinary stones.	(Kasote et al., 2017)
	China	Whole plant	Hepatitis, cholezystolithiasis.	(Li & Xing, 2016)
	China	Whole plant	Headache, cough.	(Li et al., 2017a)
	-	Aerial parts	Jaundice, hepatitis, liver cirrhosis, cholelithiasis.	(Liu et al., 2020b)
	China	Aerial parts	Cholelithiasis, urolithiasis.	(Liu et al., 2017)
	India	Whole plant	Stomach ache, emmenagogue, stomachic, purgative.	(Dutt et al., 2015)
	Angola	Leaves	Prevents abortion.	(Lautenschläger et al., 2018)
	Indonesia	Leaves	Wounds, diarrhoea.	(Bahtiar et al., 2017)
	-	Leaves	Central nervous system stimulation, seizures, diuretic, high fever, bone fractures, diarrhoea.	(Revanasiddappa et al., 2019)
<i>Desmodium triflorum</i> (L.) DC.	Taiwan	-	Dysmenorrhea, muscle spasm, cough, pain, poisoning.	(Chien et al., 2020)
	Bangladesh	-	Eye diseases, stomach troubles.	(Apu et al., 2012)
	India	Whole plant	Pruritus, skin eruption, wounds and cuts.	(Sundarajan & Arumugam, 2017)
	-	Leaves	Diarrhoea, seizures, galactagogue, wounds and abscesses difficult to heal.	(Gavalapu et al., 2013)
	-	-	Sores, itch, dysentery, laxative.	
	India	Leaves	Dysentery.	(Shanmugam et al., 2012)
	India	Leaves	Boils, eye ailments, spleen disorders, wounds.	(Gairola et al., 2014)
	India	Whole plant	Stomach pain, piles.	(Dey & De, 2012)
	China	Whole plant	Stomach ache, cold.	(Li et al., 2017a)
	India	Leaves	Wounds.	(Kumar et al., 2013)
<i>Desmodium tortuosum</i> (Sw.) DC.	-	Leaves	Diarrhoea, seizures, antispasmodic, sympathomimetic, central nervous system stimulation, curare-mimetic activity, diuretic, galactagogue, wounds and abscesses difficult to heal.	(Bhosle, 2013)
	-	-	Sores, itch, cough, asthma, dysentery, laxative, high fever, bone fractures.	
	India	Leaves	Wounds, dysentery, abscesses.	(Sambandan & Dhatchanamoorthy, 2012)
	Thailand	Roots	Diuretic, cough, asthma.	
	Thailand	Whole plant	Abscesses, psoriasis.	(Neamsuvan & Bunmee, 2016)
	Thailand	Whole plant	Aphthous ulcer, diarrhoea.	(Neamsuvan & Ruangrit, 2017)

Species	Country or place where was reported	Part(s) used	Traditional medicinal uses	References
<i>Desmodium triflorum</i> (L.) DC.	India	Leaves	Swelling.	(Sureshkumar et al., 2017)
	-	-	Diarrhoea, wounds, abscesses, inflammation, cough, bronchitis, fever, stomach ache, piles, dysentery.	
	India	Leaves	Body ache, body swelling.	(Chander et al., 2014)
	Mauritius	Whole plant	Diarrhoea, urinary tract infection.	(Samoisy & Mahomoodally, 2016)
	Sri Lanka	-	Snake bites.	(Dharmadasa et al., 2016)
	Colombia	Whole plant	Pulmonary affections, depurative of blood, laxative, against herpes.	(Paniagua-Zambrana et al., 2020)
	-	Leaves and flowers	To strengthen the uterus.	
	India	-	Abscesses, eruptions, body ache, breast pain, colic, diarrhoea, dysentery, menorrhoea, sores, spleen complaints, nail disorders, toothache.	
	Mauritius	-	Pulmonary infections.	(Suroowan et al., 2019)
	-	Leaves	Treatment of seizures, diarrhoea, galactagogue, antispasmodic, sympathomimetic, central nervous system stimulation, curare-mimetic activity, diuretic, wounds and abscesses difficult to heal, sores, itch, to reduce high fever.	(Bhosle, 2011)
<i>Desmodium triquetrum</i> (L.) DC.	-	Whole plant	It is given to children to treat asthma and coughs, bone fractures.	
	-	Roots	Promoting labor, in the treatment of vertigo, carminative, tonic, diuretic.	
	-	-	Dysentery, laxative.	
	-	-	Cooling, expectorant, galactagogue, cough, bronchitis, wounds, abscesses, sores, pruritus, dysentery, flatulence and burning sensation, in stomach ache, dermatosis, diarrhoea, ophthalmia, rheumatism, tonic, diuretic, tumor.	(Singh et al., 2016)
	China	Whole plant	Haemostasis.	(Gao et al., 2019)
	India	Leaves and roots	Wounds, abscesses, dysentery, diuretic.	(Sharma & Kumar, 2021)
	-	-	Antiespasmotic in infants, to expel helminths and to treat indigestion, splenic abscesses, chronic cough, tuberculosis, diuretic, hepatitis, chronic metabolic diseases.	(Vedpal et al., 2019)
	Laos	Whole plant	Combat liver parasites.	
	-	Leaves	Piles.	(Joshi et al., 2018)
	-	Leaves	Diabetes, obesity, flu, fever, sore throat, nephritis, cholestatic hepatitis, enteritis, bacillary dysentery, pregnant vomiting, prostatic hyperplasia.	(Wu et al., 2014)

Species	Country or place where was reported	Part(s) used	Traditional medicinal uses	References
<i>Desmodium triquetrum</i> (L.) DC.	-	-	Prevents fainting from the heat (heat stroke), fever, colds, cough, tonsillitis, parotitis, acute nephritis, edema, enteritis, dysentery, hookworm infection, tapeworm infection in the liver, trichomonal vaginitis, vomiting in pregnancy, galactagogue, malnutrition in children, jaundice, hepatitis, tuberculosis, scleroderma, hemorrhoids, rheumatism. Wounds and abscesses that do not heal well. Dysentery, laxative.	(Thandar & Tun, 2015)
	Sri Lanka	Leaves		
		-		
	Bangladesh	Leaves and stems	Boils, toothache, body pain, (Fahim Kadir et al., 2014)	
	Myanmar	Roots, barks, leaves and fruits	Lung diseases, urinary diseases, (Aung et al., 2016) gynecological diseases, analgesic.	
<i>Desmodium umbellatum</i> (L.) DC.	India	-	Fever.	(Arora, 2018)
<i>Desmodium uncinatum</i> (Jacq.) DC.	Uganda	Leaves and flowers	Against helminths, yellow fever, diarrhoea, toothache.	(Namukobe et al., 2011)
<i>Desmodium velutinum</i> (Willd.) DC.	India	Root	Scorpion sting.	(Suthari et al., 2018)
	Nigeria	-	Fever.	(Fred et al., 2012)
	-	-	Headache.	
		Leaves	Diarrhoea, aphrodisiac.	
	-	-	Aches, pains, diarrhoea, haematuria, diuretic, laxative, cough, fever.	(Ebana et al., 2016)
	-	-	Diarrhoea, fever, anti-inflammatory, antinephrolithic, antibacterial, antitumor, antiulcer, antilipidaemic, analgesic, antimalarial, aphrodisiac.	(Eze-Steven & Ude, 2019)
	Nigeria	Leaves with flower	Infertility, irregular menstruation, general body vitality.	(Atawodi et al., 2014)
	Angola	Leaves	Infertility women.	(Lautenschläger et al., 2018)
	Guinea-Bissau	Leaves and root	Cholera.	(Frazão-Moreira, 2016)
	India	Leaves	Body pain.	(Sukumaran et al., 2020)
	Guinea-Bissau	Leaves and roots	Intestinal problems.	(Catarino et al., 2016)
	Benin	Roots	Latent jaundice.	(Allabi et al., 2011)
<i>Desmodium velutinum</i> (Willd.) DC.	Republic of the Congo	Leaves	Female infertility.	(Tchicaillat-Landou et al., 2018)
	Burkina Faso	Bark	Diabetes.	
	Thailand	Stems and leaves	Hypertension.	(Khuankaew et al., 2014)
	-	Leaves, root, stem	Analgesic, venereal diseases, eye treatments, diarrhoea, dysentery, vermifuge, tuberculosis or related symptoms.	(Fomogné-Fodjo et al., 2014)
	-	-	Aches, pains, fever, analgesic.	(Chinenye et al., 2018)
	Benin	Roots	Male infertility.	(Agbodjento et al., 2020)

Species	Country or place where was reported	Part(s) used	Traditional medicinal uses	References
<i>Desmodium zonatum</i> Miq.	China	Leaves	Burns, scalds.	(Zheng et al., 2013)

The symbol - indicates the absence of information.

A total of 45 different biological activities were studied in this genus. The five most studied biological activities were antioxidant (46), antimicrobial (34), anti-inflammatory (16), hepatoprotective (13), and antinociceptive (9). Complete information of the biological activities studied in the genus *Desmodium* is presented in Table No. 2.

**Table No. 2**  
**Experimentally demonstrated biological activity of the genus Desmodium**

Species	Demonstrated biological activity	Part(s) used	Type of extract	Groups of compounds / Secondary metabolites	References
<i>Desmodium ascendens</i> (Sw.) DC.	Antioxidant	Leaves	Aqueous methanolic.	-	(Muanda et al., 2011a)
	Immunoactivity	Leaves and stems	Aqueous.	-	(Rammal & Soulimani, 2011)
	Antihistamine	Whole plant	Hydroglyceric.	-	(Martini & Solimé, 2014)
	Airway relaxant	Leaves	Aqueous.	-	(Irié-N'guessan et al., 2011)
		Leaves	Methanolic.	-	
		Leaves	Aqueous ethanolic.	-	
	Antinociceptive	Leaves	Aqueous.	-	(Charles et al., 2016)
	Antioxidant and hepatoprotective	Leaves	Aqueous.	-	(Chuisseu et al., 2020)
	Renoprotective and cardioprotective	Leaves	Aqueous.	-	(Adinoyi, 2020)
	Antimicrobial	Leaves	Aqueous.	-	(Muanda et al., 2011b)
<i>Desmodium ascendens</i> (Sw.) DC.	( <i>Staphylococcus aureus</i> , <i>Bacillus subtilis</i> , <i>Escherichia coli</i> , <i>Pseudomonas aeruginosa</i> , <i>Candida albicans</i> )	Leaves	Aqueous methanolic.	-	
	Hepatoprotective	Leaves and twigs	Aqueous.	• D-pinitol	(Magielse et al., 2013)
	Renoprotective (against oxidative stress)	Aerial parts	Hydroalcoholic.	-	(François et al., 2015)
	Antiulcer	Stems and leaves	Methanolic.	-	(Ayoola et al., 2018)
	Antioxidant	Stems and leaves	Methanolic.	-	
	Antipsychotic	Whole plant	Ethanolic.	-	(Amoateng et al., 2017)
	Antioxidant	Leaves	Aqueous ethanolic.	-	(Zielińska-Pisklak et al., 2015)
	Alexiteric	Leaves	Aqueous.	-	(Granda, 2015)
		Leaves	Ethanolic.	-	
		Leaves	Hexane.	-	
	Antimicrobial ( <i>C. albicans</i> , <i>Candida parapsilosis</i> , <i>Candida krusei</i> , <i>S. aureus</i> , <i>Enterobacter cloacae</i> , <i>Enterococcus faecalis</i> , <i>E. coli</i> , <i>Klebsiella pneumoniae</i> , <i>P. aeruginosa</i> , <i>Acinetobacter baumannii</i> )	Roots	Methanolic.	-	(Adeniyi et al., 2013)
	Antioxidant	Stems, leaves	Crude methanol.	-	(Konan et al., 2012)
		Stems, leaves	Ethyl acetate.	-	
		Stems, leaves	<i>n</i> -butanol.	-	
	Antibacterial ( <i>S. aureus</i> , <i>Bacillus cereus</i> , <i>E. coli</i> )	Whole plant	Chloroform / methanol.	-	(Lakkakula et al., 2017)

Species	Demonstrated biological activity	Part(s) used	Type of extract	Groups of compounds / Secondary metabolites	References
	Antibacterial ( <i>S. aureus</i> , <i>K. pneumoniae</i> , <i>Moraxella catarrhalis</i> , <i>Mycobacterium smegmatis</i> , <i>Mycobacterium aurum</i> )	Whole plant	Methanol / dichloromethane.	-	(Fomogne-Fodjo et al., 2014)
<i>Desmodium affine</i> Schlechl.	Antifungal ( <i>Microsporum gypseum</i> )	Leaves	Methanolic.	-	(de Morais et al., 2017)
<i>Desmodium barbatum</i> (L.) Benth.	Antifungal ( <i>M. gypseum</i> )	Leaves	Methanolic.	-	(de Morais et al., 2017)
<i>Desmodium canescens</i> (L.) DC.	Antiulcer	Aerial parts	Ethanolic.	-	(Macha et al., 2018)
<i>Desmodium caudatum</i> (Thunb.) DC.	Antimicrobial synergism against methicillin-resistant <i>S. aureus</i> (MRSA)	-	-	• Sophoraflavanone B	(Mun et al., 2013)
	Anti-inflammatory	-	-	• 2'-hydroxyl yokovanol	(Li et al., 2014a)
	Antioxidant	-	-	• 2'-hydroxyl neophellamuretin	
				• 1,3,5,6-tetrahydroxyxanthone	
	Antifungal ( <i>Trichophyton</i> sp.)	Roots	-	• New compound isolated*	(Sasaki et al., 2012b)
	Antibacterial (MRSA)	Roots	-	• Sophoraflavanone B	(Mun et al., 2014)
	Antibacterial ( <i>S. aureus</i> )	-	-	• Sophoraflavanone B	(Farhadi et al., 2019)
	Antiplatelet	-	-	• Swertisin	(de Almeida Chaves et al., 2019)
				• Lupeol	
	Analgesic	Whole plant	Ethanolic.	-	(Ma et al., 2011a)
	Anti-inflammatory	Whole plant	Ethanolic.	-	
	Antipyretic	Whole plant	Ethanolic.	-	
	Antioxidant	Whole plant	-	• Descaudatine A	(Xu et al., 2020)
				• 8-dimethylallyltaxifolin	
	Anticancer	Whole plant	-	• Nothofagin	
				• 2'-hydroxyl neophellamuretin	
				• 2"-O-rhamnosylswertisin	

Species	Demonstrated biological activity	Part(s) used	Type of extract	Groups of compounds / Secondary metabolites	References
	Antibacterial (MRSA and methicillin-sensitive <i>S. aureus</i> )	Roots	-	<ul style="list-style-type: none"> <li>• Leachianone G</li> <li>• Sophoraflavanone B</li> <li>• 8-(<math>\gamma</math>,<math>\gamma</math>-dimethylallyl)-5,7,4'-trihydroxydihydroflavonol</li> <li>• Yukovanol</li> </ul>	(Sasaki et al., 2012a)

The symbol - indicates the absence of information, the symbol \* indicates that the chemical name of the secondary metabolite is not reported

Figure No. 2  
Some of the *Desmodium* species located in Cuenca, Ecuador  
A) *Desmodium adscendens*; B) *Desmodium molliculum*

The antioxidant, antimicrobial, anti-inflammatory, antinociceptive, anti-inflammatory and hepatoprotective biological activities were the most mentioned in this review. The extensive study of these activities has made it possible to correlate them

with several of their traditional medicinal uses. Although antioxidant activity was the most evaluated, it is not possible to establish a direct relationship with specific traditional medicinal uses. However, it is known that antioxidant activity is closely related to

other biological activities because it prevents cell deterioration by inhibiting free radicals and other oxidant agents like hydroxyl radicals, peroxy radicals, hypochlorous acid, and superoxide radicals (Chuisseu et al., 2020; Muanda et al., 2011a). Free radical-mediated diseases like asthma, rheumatoid arthritis, aging, cardiovascular, mutagenic, inflammation-associated diseases, among others, could be attenuated by the potent scavenger potential of reactive oxygen species from extracts of the genus (Galvez, 2015; Kalyani et al., 2011a; Kurian et al., 2010b; Zielińska-Pisklak et al., 2015).

In this review, the antioxidant activity was determined in extracts from *D. adscendens* (Figure No. 2), *D. caudatum*, *D. gangeticum*, *D. heterocarpon*, *D. intortum*, *D. microphyllum*, *D. molliculum* (Figure No. 2), *D. motorium*, *D. ramosissimum*, *D. renifolium*, *D. scorpiurus*, *D. sequax*, *D. styracifolium*, *D. tortuosum*, *D. triflorum*, *D. triquetrum*, *D. uncinatum* and *D. velutinum*. Their benefits are attributed to phenolic and nitrogen compounds such as flavonoids, anthocyanins, carotenoids, polyphenols and tannins (François et al., 2015; Galvez, 2015; Kalyani et al., 2011a; Muanda et al., 2011a). Specific metabolites have also been determined in several species largely responsible for the antioxidant potential. Li et al. (2014a), determined that a xanthone compound, 1,3,5,6-tetrahydroxyxanthone, is primarily responsible for the antioxidant activity in *D. caudatum*. This compound is uncommonly found in the genus *Desmodium*. Compounds such as descaudatine A, nothofagin, 8-dimethylallyltaxifolin and 8-prenylquercetin, described as potent antioxidants, have also been isolated from this species (Guo et al., 2016; Xu et al., 2020). Rastogi et al. (2011), indicate that caffeic acid and chlorogenic acid might be responsible for the antioxidant activity of *D. gangeticum*. In *D. sequax* chlorogenic acid is the main component of the antioxidant activity (Tsai et al., 2011). Many of the studies suggest that the effect is evidenced in a concentration-dependent manner and that the antioxidant potential varies depending on the solvent used in the extraction because each extract possesses unique chemical constituents (Sankar et al., 2013; Li et al., 2014a; Ezealigo, 2016).

Antimicrobial activity has been mainly studied in *D. caudatum*, *D. adscendens*, *D. gangeticum* and *D. molliculum*. It has been determined that extracts from different species of the genus *Desmodium* possess inhibitory effects on the growth of bacteria and fungi even at low concentrations (MIC values lower than 125 µg/mL),

several of which are important clinical pathogens. Thus, *D. adscendens* has inhibitory properties on *E. coli*, *A. niger*, *P. aeruginosa*, *B. subtilis*, *S. aureus*, *C. albicans* and *K. pneumoniae* (Muanda et al., 2011b; Adeniyi et al., 2013; Landeta, 2015). *D. gangeticum*, *D. gyrans* and *D. ramosissimum* also showed a strong antimicrobial activity on the same strains (Lagudu & Owk, 2016) and over *S. typhi*, *S. mutants* (Alli et al., 2011; Karthikeyan et al., 2012) and *V. cholerae* (Kalirajan et al., 2012). Pitkin et al. (2019), reported that *D. incanum* proved to be very potent in decreasing the growth of *K. pneumonia*, *S. aureus* and group D *Streptococcus*. These findings support the widely use in worldwide traditional systems of medicine, where are mainly used to treat diseases associated with the respiratory tract, such as tuberculosis and bronchitis (Fomogne-Fodjo et al., 2014), in gastrointestinal and urinary tract infections (Muanda et al., 2011b), also in the treatment of wounds and abscesses and other skin conditions and infections in general and related symptoms (Alli et al., 2011; Sasaki et al., 2012b; Lagudu & Owk, 2016; Lakkakula et al., 2017).

Chemical constituents which are attributed to the antimicrobial action, in a general way are flavonoids, tannins, alkaloids, saponins, asteroids and astragalalin (Adeniyi et al., 2013; Landeta, 2015). Further studies have determined a relationship between structure and activity in flavonoids, it is suggested that the amphipathic features of these molecules play an important role in the antibacterial properties. Hydrophobic substituents like prenyl groups, alkyl chains, alkylamino chains and nitrogen or oxygen containing heterocyclic moieties usually improve the activity (Farhadi et al., 2019). Flavonoids and prenylated flavonoids isolated from *D. caudatum* demonstrated effectiveness against methicillin-resistant *S. aureus*, an important example of these molecules is sophoraflavanone B (Mun et al., 2013; Mun et al., 2014). This kind of molecules was described even as potent antifungal agents by Sasaki et al. (2012b), its efficacy was tested against strains of *A. niger*, *Penicillium* sp., *Rhizopus* sp. and *Trichophyton* sp.

Another important activity widely studied in the genus is the anti-inflammatory. *D. gangeticum* and *D. caudatum* are the most cited in this review for this activity, nevertheless, more authors that reported this potential in other species. It has been suggested that the anti-inflammatory effect relays in secondary metabolites such as flavonoids, saponins, pterocarpinoids, alkaloids and their N-oxides (Sagar et al., 2010; Rastogi et al., 2011; Zhu et al., 2011

Basheer & Satish, 2018). Several mechanisms have been described by which extracts of *Desmodium* species achieve the anti-inflammatory effect. Flavonoids are described as molecules with the ability to inhibit the cyclooxygenase pathway (Sagar et al., 2010; Zhu et al., 2011). 2'-hydroxyl yokovanol and 2'-Hydroxyl neophellamuretin, phenolic compounds isolated from *D. caudatum*, showed inhibitory effects on the synthesis of pro-inflammatory cytokines (Li et al., 2014a). Studies on this activity in *D. gangeticum* and *D. molliculum* demonstrated the decrease in pro-inflammatory mediators like TNF- $\alpha$ , IL-1 $\beta$ , IL-6, COX-2 (Ragavan, 2017), the inhibition of Th2 lymphocytes and eosinophils, the concentration of IL-4, IL-5, IL-8 and IgE, a fundamental mediator in the pathophysiology of asthma (Acero-Carrión et al., 2012). All of the above explains the traditional use given to it in traditional medicine, it is employed to treat febrile diseases, wounds, rheumatic diseases, among others (Ma et al., 2011a; Zhu et al., 2011; Li et al., 2014a).

The determination of the antinociceptive potential has been of interest and cited by several authors, studied in some species of *Desmodium*, but mainly in *D. gangeticum*. Species from this genus have been traditionally used to treat body ache, pains, general inflammations, diseases associated with smooth muscles, fever, malaria, and rheumatism (Ahmed et al., 2013; Charles et al., 2016). Anti-inflammatory, antinociceptive and antipyretic activities of many plants have been attributed to their secondary metabolites such as saponin, terpenoids, flavonoids and steroids (Ahmed et al., 2013). Regarding the possible mechanisms of action associated with the activity, many agree that the extracts probably inhibit the central synthesis of prostaglandins such as cyclooxygenase, lipoxygenase or induce the nitric oxide synthesis, additionally, modify intracellular signalling pathways in immune cells (Ma et al., 2011a; Ahmed et al., 2013; Charles et al., 2016). A preliminary research conducted by Charles et al. (2016), showed that procyanidins, a class of flavonoids obtained from *D. adscendens*, modules the arachidonic acid pathway, inhibits the gene transcription, protein expression and activity of inflammatory enzymes, as well the secretion of anti-inflammatory mediators.

The importance of the study of hepatoprotective activity of the genus *Desmodium* is associated with its traditional medicinal used in Latin America and Africa, *D. adscendens*, by example, has been used in management of asthma and liver related diseases (Chuisseu et al., 2020), *D. styracifolium* is

used to treat jaundice hepatitis, liver cirrhosis and cholelithiasis (Liu et al., 2020b). In our review this activity is more cited in this species but also in *D. molliculum*. Phytoconstituents suggested for this activity are steroids, triterpenoids and flavonoids (Kalyani et al., 2011b; Jayadevaiah et al., 2012). Lipid peroxidation is considered the main molecular mechanism involved in the oxidative damage of cell structures and the pathogenicity and maintenance of hepatitis. C-glycosyl flavonoids and cerebrosides, isolated from *D. uncinatum*, showed a potent inhibitory activity in lipid peroxidation (Tsafack et al., 2018).

There is an important relationship between antioxidant and hepatoprotective effects, due to the inhibition of oxidative stress and capacity to protect membrane integrity on liver cells. Besides, *D. adscendens* revealed anti-HCV activity in cell culture (Chuisseu et al., 2020).

One of the specific molecules over which the hepatoprotective potential has been demonstrated has been schaftoside, a flavonoid common in some *Desmodium* species, which can decrease the lipid accumulation and the hepatic inflammation by altering eicosanoids metabolic pathway (Liu et al., 2020a; Liu et al., 2020b). D-pinitol is another important molecule, found in the genus *Desmodium*, with radical scavenging activity, this contributes to the protective effect of extracts, however, it does not show a curative effect (Chuisseu et al., 2020). In all the cases, the hepatoprotective potential was evidenced by reduction of biochemical indicators such as SGOT, SGPT, ALP, total bilirubin, by increasing the levels of total proteins and it was confirmed by histopathological examinations on liver sections (Jayadevaiah et al., 2012; Venkatachalam & Muthukrishnan, 2013; Gordillo et al., 2019).

## CONCLUSIONS

The genus *Desmodium* includes a wide variety of species with an important medical value. Lots of medicinal traditional uses have been supported by through the study of biological activity in laboratory. However, there are still a lot of them that have not yet been demonstrated, our review could be used as a referent for further investigations.

## ACKNOWLEDGEMENTS

The authors acknowledge Jéssica Calle López (Department of Biosciences, Group of Medicinal Plants and Natural Products, Faculty of Chemistry, School of Biochemistry and Pharmacy, Universidad de Cuenca, Ecuador) for the photographs of Desmodium species.
